PREFACE

This preliminary technical evaluation of a U-2 reconnaissance mission flown over southwest and southeast Communist China on 31 October 1964 was developed for the Special Group by the following elements of the Directorate for Science and Technology:

Office of Scientific Intelligence

Office of Special Activities

Office of ELINT

The evaluations are based on information and data provided by:

National Photographic Interpretation Center, DD/I

Joint SOBE SIGINT Processing Center, Okinawa

PACOM ELINT Center, Fuchou, Japan

Graphics support has been provided by the Office of Research and Reports, DD/I.

SUMMARY

This mission was flown by a U-2 aircraft from Bon Takhli,	
Thailand, on 31 October 1964. The mission penetrated the China border	
from Laos and was over areas of southwest and southeast China for	
approximately 5 hours, subsequently landing on Taiwan. Figure 1	
shows the flight path of the mission and the areas covered by photo-	
graphy.	25X1
at least two fighter reactions	25X1
were noted in direct response to the mission. More than 50 percent	
of the route was obscured by heavy cloud cover. However, excellent	
photography was obtained on one major	25X1
airfield in western China. Also included in bonus photography was a	
MiG-19 (FARMER) aircraft in flight, possibly equipped with air-to-	
air missiles/rockets. A total of 16 COMOR targets were reported in	
the preliminary photographic analysis. There were no surface to-air	
missile (SAM) sites observed by the mission,	25X1

BACKGROUND

Mission C224C was flown on 31 October 1964 from Bon Takhli.	
Thailand with recovery at Tao Yuan, Taiwan. The mission was	
planned against	25 X ′
and was to cover 23 other COMOR targets along the flight path. The	
U-2 departed Bon Takhli at 0229 and landed at Tao Yuan at 0910Z for	
a total flight time of six hours and forty-one minutes. The mission	
aircraft was over denied territory for five hours and twenty minutes.	
Forecast weather at Go-No-Go time was Cat II (scattered clouds)	
with Cat IV and V (heavy cloud cover) over the	25 X ′
major portions of the inbound and outbound legs. The pilots report of	
weather was better than forecast, and indications	25 X ′
show that the pilot flew the mission route as scheduled.	
The U-2 used on this mission did not carry the tracker camera.

This was the first identification of MiG-19 aircraft on any airfield in western China. The aircraft plant adjacent to Wu-Kung Airfield 25X1 and a new has had several new buildings added since taxiway connects the plant to the airfield. However, the plant still does not appear to be operational. (See figure 4.) Farmer (MiG-19) Aircraft in Flight. (33-34N 110-23E) -- While at a position approximately 85 n.m. miles east of Hsian, the mission photographed a MiG-19 aircraft in flight at an estimated altitude of 42,000 feet, below and slightly aft of the U-2 position. Preliminary analysis reveals possible air-to-air missiles or rockets mounted under the wings of the aircraft on the inboard side of the wing tanks. (See figure 5.) Coverage of six other airfields by the mission reflected no

appreciable changes since previous coverage by U-2 photography.
